Reasons for Allowance

The following is an examiner's statement of reasons for allowance: After further consideration of applicant's arguments, examiner concluded that Ralph et al. fail to disclose or suggest a solid oxide fuel cell comprising an anode and a cathode separated by a solid electrolyte, the cathode including an A and/or A' site deficient perovskite of general formula of $(A_{1-x}A'_x)_{1-y}FeO_{3-\delta}$ or of general formula $(A_{1-x-y}A'_x)FeO_{3-\delta}$, wherein A is La alone or with one or more rare earth metals or a rare earth metal other than Ce alone or a combination of rare earth metals and X is in the range of from about 0 to about 1; A' is Sr or Ca or mixtures thereof and Y is in the range of from about 0.01 to about 0.3; δ represents amount of compensating oxygen loss, and wherein if either A or A' is zero the remaining A or A' is deficient. Ralph et al. teaches the formula is $La_{0.8}Sr_{0.2}FeO_3$ in which teaches that stoichiometric iron perovskites are well known and not the same as "off stoichiometric" which are the iron based cation currently claimed by the applicant. Applicant claims a formula such as $La_{0.7}Sr_{0.2}FeO_3$ which is non-stoichiometric with holes in the A site. In the present invention it is seen that the A site, that is combination of A and A' will always be less than 1 and that is because although X ranges from 0-1 Y is always a positive number between 0.01 and 0.3. Furthermore it is stated in the claim that if either A or A' is zero the remaining A or A' is deficient.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
